

DMI INTERNATIONAL, LLC

Forty-six years and this magnificent machine that once bent pipe on the Alaskan Pipeline is still running strong.

This grand beauty is one of the 11 Pipe Bending Machines that bent pipe for the Alaskan Pipeline from 1975-1977. Originally this machine was owned by Carey Crutcher II, who at that time owned CRC International. It changed hands a few times but was purchased by API and moved to Tinidad where it helped lay a 48" Pipeline, using DMI bending sets, mandrels & clamps for the job. When the opportunity arose, DMI purchased this machine with the intention of restoring it back to its glory.

We upgraded this machine with a Perkins 1106D Diesel engine with 173 hp. All of the cylinders have been equipped with new seals. We replaced the old fuel tank with a new 79 gallon fuel tank. This ensures that the sediment from the old tank doesn't infiltrate the system. We replaced the old hoses and clamps to ensure proper pressurization throughout this unit. Outfitted with a 390 Air Compressor mounted on the side of this machine adds a nice touch to this unit.
